1. Introduction 3
2. Data Replication & Backup Strategy 4
3. Security & Encryption 5
4. Service Level Agreement 7

1. Introduction

This document outlines the **Security Policies** and **Service Level Agreements (SLAs)** applicable to the services provided by **MocDoc**. It defines the measures in place to ensure **data protection, system integrity, confidentiality, availability,** and **service reliability**, as well as the performance standards and response commitments made to our clients.

2. Data Replication & Backup Strategy

MocDoc employs a robust **real-time replication mechanism** that maintains **three copies of every data record** across **independent logical machines**. The deployment architecture is built around a distributed data store pool, ensuring seamless scalability, high availability, and fault tolerance.

In the event that one of the systems becomes unreachable, disconnected, or is taken offline for maintenance, the remaining nodes automatically **redistribute and synchronize data** through an in-built self-healing mechanism—ensuring uninterrupted operations and preventing data loss.

In addition to real-time replication, MocDoc performs **scheduled full backups** to further strengthen data protection and disaster recovery capabilities:

- **Real-time Replication:** Every update is synchronously replicated to three nodes.
- **Full Backup:** Performed weekly (every Sunday).
- **Backup Retention:** Cloud backups are maintained based on **Current Month -1** and **Current Week -1** copies.

Disaster Recovery Objectives:

- **Recovery Point Objective (RPO):** < 15 minutes
- **Recovery Time Objective (RTO):** < 2 hours

This strategy ensures that in the unlikely event of a major outage or data center failure, data can be restored with minimal data loss and downtime, maintaining business continuity and compliance with industry best practices.

3. Security & Encryption

MocDoc follows a comprehensive security framework designed to ensure **data confidentiality, integrity, and availability** at all times. The platform implements **multi-layered security controls** across infrastructure, application, and network levels.

1. Data Encryption

- **Encryption at Rest:** All stored data, including backups, is encrypted using industry-standard **AES-256** encryption.
- **Encryption in Transit:** All data transmitted between client devices, APIs, and servers is secured via **TLS 1.2/1.3** to prevent interception or tampering.
- **Credential Protection:** Passwords and sensitive tokens are stored using salted and hashed formats compliant with OWASP recommendations.

2. Access Control & Authentication

- Role-based access control (RBAC) is enforced across the application to ensure users access only the data relevant to their roles.
- Users account passwords are stored using **one-way encryption (Message Digest)** to ensure they cannot be retrieved in plain text. This approach guarantees that even system administrators or developers cannot view user passwords, enhancing overall data security and compliance.
- Enforces **single-session login per user**, preventing the same credentials from being used simultaneously on multiple devices or browsers
- Optional **multi-factor authentication (MFA)** is supported for enhanced login security.

3. IP Address Whitelisting

MocDoc supports **IP address whitelisting** to restrict system access to specific physical locations, providing an additional layer of security for businesses.

- **Controlled Access**: Doctors and staff can be restricted to access the system only from

IP addresses on the approved whitelist.

- **Selective Enablement**: The IP whitelisting feature can be enabled or disabled selectively based on business requirements.
- **Unrestricted Owner Access**: Business owners retain the ability to access the system from any location, regardless of the whitelist settings.

This ensures secure access control while maintaining flexibility for management oversight.

4. Network & Infrastructure Security

- Firewalls, intrusion detection, and continuous monitoring are implemented at both application and network layers.
- All servers are hosted in **ISO 27001 and SOC 2 compliant data centers**, ensuring globally recognized security standards.
- Regular vulnerability assessments and penetration testing are conducted to identify and mitigate risks proactively.

5. Audit & Monitoring

- Detailed audit trails are maintained for all critical operations.
- Logs are continuously monitored for anomalies and retained as per compliance requirements.

6. Compliance & Best Practices

MocDoc's security framework aligns with **ISO 27001:2022** standards and follows best practices drawn from **HIPAA** and **GDPR** principles, ensuring secure handling of patient and operational data across all environments.

4. Service Level Agreement

1. Uptime Guarantee:
MocDoc is committed to delivering a high level of service availability. We guarantee that system uptime will not be less than **99%**, ensuring reliable access to your healthcare management platform.

2. Support Availability:
Our dedicated support team is available **24/7** to assist with any issues, queries, or technical guidance.

3. Single Point of Contact:
To facilitate efficient and effective communication, we request that customers designate a **single point of contact**. This individual will serve as the primary liaison between your organization and MocDoc, streamlining issue resolution and coordination.

4. Scheduled Maintenance:
Regular maintenance activities may be scheduled to ensure the **stability, performance, and security** of the MocDoc system. Customers will be notified in advance of any planned maintenance windows.

5. Data Security and Privacy:
MocDoc prioritizes the protection of sensitive patient and organizational data. We implement **strict security measures** to safeguard the **confidentiality, integrity, and availability** of all information stored and processed in the system.

6. SLA Review:
The SLA Policy will be **periodically reviewed and updated** to ensure it remains relevant and aligned with evolving customer needs, industry standards, and best practices.

	Severity	Description	Response From Customer	Response Time
Show Stopper	P1	Issue that affects a central requirement prevents further use of the system for which there is no workaround.	Customer will call MocDoc support team.	1 Hour from the time, the issue was reported to MocDoc (represented by the support team)
High	P2	Issue that affects a central requirement, for which there is a workaround. End user cannot understand the workaround to work efficiently.	Customer will call MocDoc support team.	1-4 Hours from the time, the issue was reported to MocDoc (represented by the support team)
Medium	P3	Issue that affects a non - central requirement prevents further use of the system for which there is no workaround. The feature cannot be used.	Customer will call MocDoc support team.	1 Day from the time, the issue was reported to MocDoc (represented by the support team)
Low	P4	Issue that affects a non - central requirement, for which there is a workaround.	Customer will call MocDoc support team.	1-2 Days from the time, the issue was reported to MocDoc (represented by the support team)

Escalation Matrix

Level 1: Initial Support

Clients can reach out to the Support Team through the following methods:

- Raising Tickets on the Support Portal (Tickets will be addressed on a priority basis).
- Helpline Number: 81898-81898.

Level 2: First-Level Escalations

If a resolution is not provided at Level 1, you may escalate the issue by contacting:

- Support Head: Mr. Siddiq
- Email: siddiq.a@mocdoc.com
- Contact: 9003184659

Level 3: Further Escalations

For any additional escalations, please send an email to the management team at:

- Email: support@mocdoc.com

Force Majeure Clause

- **Definition:** Events such as natural disasters, war, terrorism, pandemics, government regulations, strikes, or acts of God that prevent performance will constitute force majeure.
- **Notification:** The affected party must notify the other party within 12 hours of the event, explaining its impact on obligations.
- **Suspension of Obligations:** The affected party's obligations will be suspended for the duration of the force majeure event.
- **Termination:** If the event continues for more than 14 days, either party may terminate the agreement without penalties.
- **Mitigation Efforts:** The impacted party must take reasonable steps to minimize delays or damages caused by the force majeure event.

What we don't do

- We don't have access to data
- We don't sell your data to third parties
- We never send promotions to your patients
